What is Hypochlorous Acid?

Hypochlorous acid is a weak acid, with a pH similar to that of your skin, and is a naturally-occurring substance in our bodies. It is the same chemical that our own white blood cells produce to fight infection and kill bacteria. Hypochlorous acid is unique because it is one of the only known agents that is non-toxic to the delicate cells that heal our wounds and protect us, while being lethal to almost all known dangerous pathogens, making it effective against bacteria, viruses, and fungi (outside the body).

Water • Salt • Electricity

Hypochlorous acid is a liquid that was first used over 175 years ago! It is now produced by putting an electric charge through salt water resulting in electrolyzed water (Anolyte). The solution at this point contains >99.3% water, with the remaining solution being chloride salts and hypochlorous acid.

EPA List N

Pure&Clean has been proven effective against emerging pathogens. Pure&Clean® Disinfectant/Sanitizer is now included on EPA's **List N: Disinfectants for Use Against SARS-CoV-2 (COVID-19)**. Our EPA registration number is 92108-1-88098

Reduces cross-contamination resulting in fewer **HAIs**
